

2011 Variety Guide

Western Sugar South

Syngenta's Hilleshög® brand sugarbeet seed genetics continue to be the industry leader for Rhizoctonia Root and Crown Rot and Cercospora Leaf Spot tolerance. Rhizoctonia and Cercospora are the most prevalent diseases that consistently challenge growers in CO, NE and WY. Our commitment to you, the grower, and to Western

Sugar Cooperative is evident in the number of quality genetics that we offer. For 2011, our diversified portfolio continues with new Curly Top, Fusarium and Aphanomyces tolerant varieties and improved Root Aphid-tolerant varieties. We understand that healthy, high recoverable sugar /ton varieties with low tare attributes and excellent quality characteristics (SLM) are exactly what you want to harvest, to deliver to your storage piles – and to process in your factories. And that is our aim!

Thank you for your business and trust in 2010. We look forward to delivering you a high quality product for 2011 that has undergone extensive testing for germination, vigor, and purity throughout the production process. All of us at Syngenta's Hilleshög brand remain committed to the high seed quality standards that lead to your success in the field.
